

# Types of lawnmowers

Once we have made the decision to [buy a](#) lawn mower, we have many doubts about which lawn mower will be suitable for us and for our garden; we wonder what would be better, if a [second-hand lawnmower](#) or a new lawnmower? If an electric lawnmower or a gasoline lawnmower? The purchase of a lawnmower surely represents the most important expense is as far as lawn care is concerned, therefore it is worth having all the information to get the right machine. Then we will share with you All types of mowers that exist with their respective advantages to make the correct choice much easier:

Manual Lawnmower:

[Manual mowers](#) are a gardening classic. They are the first type of lawnmower that existed and is still the favorite of many people. It is a tool powered by the thrust of people. The thrust we give moves the lawnmower and spins the internal rail that has several blades with helical shape that push the grass against 1 fixed blade. The cutting system is very similar to scissors. It is a very simple and easy-to-use machine, ideal for [small and uneven gardens](#). The manual lawn mower is the ideal machine for users who prefer simplicity

## Electric lawn mower

Electric [lawnmowers are quiet, eco-friendly](#) and easy to turn on with the press of a button. Except for replacing or sharpening the blade they are practically zero maintenance. Electric mowers must remain plugged in while they are being used, this turns out to be an inconvenience when you want to cut large areas of grass or when you have many obstacles such as trees, shrubs, etc. They are usually recommended [for lawns of maximum 500 m2](#), although there are models for larger extensions it can be difficult to work with so many meters of cable. It may be interesting to buy an electric generator to be able to have a power source that we can move nearby of the lawnmower.

Lawn mower:

Battery mowers have the same [advantages as electric mowers](#) with the difference that they do not need to be plugged in to operate, but they have a limited operating time, usually 60 to 90 minutes depending on the model, which can be solved when have an extra battery to replace as needed in case of cutting [large areas of grass](#). Battery mowers count as less power than an electric model, so they may get stuck if the grass is too tall.

Lawn mower:

They are the lawn mowers par excellence, they have the greatest power and autonomy; They are recommended for surfaces up to 2,000 m2. They have no problems with uneven terrain and thanks to their great power they can cut grass of any height if no problem. They usually have more options than other mowers, depending on the model, allow to regulate the height of cut, also allow to gather the lawn in a bag or to crush it and expelled by the lateral one like fertilizer. There are models with traction included so it is necessary to push them.
